

Course Outline

School Name: KEEWAYTINOOK INTERNET HIGH SCHOOL
Department Name: Science

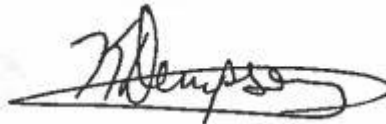

Ministry of Education Course Title: Environmental Science

Grade Level:11

Ministry Course Code: SVN3M

Teacher's Name: Raj Budhram
Developed by: Raj Budhram Date: September 2010
Revision Date: May 2016
Developed from: The Ontario Curriculum, Grade 11 Environmental Science, 2008
Text:
Prerequisite: SNC2P or SNC2D
Credits: One
Length: 110 hours
Principal's Name: Kevin Dempsey

Principal's Approval (signature) _____

Approval Date: 2016-09-16

Course Description/Rationale

This course provides students with the fundamental knowledge of and skills relating to environmental science that will help them succeed in life after secondary school. Students will explore a range of topics, including the role of science in addressing contemporary environmental challenges; the impact of the environment on human health; sustainable agriculture and forestry; the reduction and management of waste; and the conservation of energy. Students will increase their scientific and environmental literacy and examine the interrelationships between science, the environment, and society in a variety of areas.

Overall Curriculum Expectations

A. Scientific Investigation Skills and Career Exploration

- demonstrate scientific investigation skills (related to both inquiry and research) in the four areas of skills (initiating and planning, performing and recording, analyzing and interpreting, and communication
- identify and describe careers related to the fields of science under study, and describe the contributions of scientists, including Canadians, to those fields.

B. Scientific Solutions to Contemporary Environmental Challenges

- analyze social and economic issues related to an environmental challenge, and how societal needs influence scientific endeavours related to the environment;
- investigate a range of perspectives that have contributed to scientific knowledge about the environment, and how scientific knowledge and procedures are applied to address contemporary environmental problems;
- demonstrate an understanding of major contemporary environmental challenges and how we acquire knowledge about them.

C. Human Health and the Environment

- analyze initiatives, both governmental and non-governmental, that are intended to reduce the impact of environmental factors on human health;
- Investigate environmental factors that can affect human health, and analyze related data;
- Demonstrate an understanding of various environmental factors that can affect human health, and explain how the impact of these factors can be reduced.

D. Sustainable Agriculture and Forestry

- evaluate the impact of agricultural and forestry practices on human health, the economy, and the environment;
- investigate conditions necessary for plant growth, including the soil components most suitable for various species, and various environmentally sustainable methods that can be used to promote growth;
- Demonstrate an understanding of conditions required for plant growth and of a variety of environmentally sustainable practices that can be used to promote growth.

E. Reducing and Managing Waste

- analyze economic, political, and environmental considerations affecting waste management strategies;
- investigate the effectiveness of various waste management practices;
- demonstrate an understanding of the nature and types of waste and strategies for its management.

F. Conservation of Energy

- assess the impact on society and the environment of the use of various renewable and non-renewable energy sources, and propose a plan to reduce energy consumption;
- investigate various methods of conserving energy and improving energy efficiency;
- demonstrate an understanding of energy production, consumption, and conservation with respect to a variety of renewable and non-renewable sources.

Course Content

Unit	Length
1. Scientific Solutions to Contemporary Environmental Challenges	22 hours
2. Human Health and the Environment	18 hours
3. Sustainable Agriculture and Forestry	28 hours
4. Reducing and Managing Waste	16 hours
5. Conservation of Energy	26 hours
Total	110 hours

Unit Descriptions

Unit 1 - Scientific Solutions to Contemporary Environmental Challenges

In this unit, students will learn through computer simulation, laboratory inquiry, and research that current environmental issues are complex, and may involve conflicting interests or ideas. Although the ideas may be conflicting, students will appreciate that scientific knowledge enables people to make informed decisions about effective ways to address environmental challenges.

Unit 2 - Human Health and the Environment

In this unit, using scientific investigation skills students will be aware that environmental factors can have negative effects on human health. Subsequently, the students will focus on how to reduce the impacts of the environmental factors. At the end of this unit, the students should be aware that it is possible to minimize some of the negative health effects of environmental factors by making informed lifestyle choices and taking other precautions.

Unit 3 - Sustainable Agriculture and Forestry

In this unit, students will investigate the different factors that influence plant growth. They will apply their knowledge in designing a landscape project for their local area. In addition, students will analyze the effects of modern agricultural and forestry practices noting that they can have positive and negative consequences for the economy, human health, and the sustainability of ecosystems, both local and global.

Unit 4- Reducing and Managing Waste

In this unit, students will investigate the negative effects of waste disposal and determine that waste management plans should be thoroughly planned. Besides students applying their knowledge learned to plan and conduct a waste audit within their school, they will investigate a local, regional, national, or global waste management practice.

Unit 5-Conservation of Energy

In this unit, students will compare renewable and non-renewable sources of energy and investigate methods of energy conservation. Afterwards, they will conduct several activities to demonstrate what they learned such as planning and conducting an energy audit of a home or business, and designing a working model of a device that use an alternative source of energy.

Teaching/Learning Strategies

This course is organized into an eight-week series of lessons and activities that will be presented to students in remote northern communities via the internet. The eighth week will be used for course consolidation, review and the final examination. Teacher and students will communicate over the internet, while mentors in the classrooms will assume the role of liaison between the teacher and student.

A variety of strategies will be used in the online delivery of this course. Some instructional strategies include:

- Field Trip

- Retelling
- Sketching to Learn
- Mentoring
- Peer Teaching
- Discussion
- Demonstration
- Mnemonic Devices
- Textbook
- Visual Stimuli
- Visualization
- Reports
- Inquiry Process
- Scientific Method
- Writing Process

Learning goals will be discussed at the beginning of each assignment and success criteria will be provided to students. The success criteria are used to develop the assessment tools in this course, including rubrics, checklists, and exemplars.

Evaluation

The final grade will be determined as follows (Ontario Ministry of Education, 2010):

- Seventy per cent of the grade will be based on evaluation conducted throughout the course. This portion of the grade should reflect the student’s most consistent level of achievement throughout the course, although special consideration should be given to more recent evidence of achievement.
- Thirty per cent of the grade will be based on a final evaluation administered at or towards the end of the course. This evaluation will be based on evidence from one or a combination of the following: an examination, a performance, an essay, and/or another method of evaluation suitable to the course content. The final evaluation allows the student an opportunity to demonstrate comprehensive achievement of the overall expectations for the course (p. 47).

		Thinking	4
		Communication	4
	Final Examination (15%)	Application	4.5
		Knowledge/Understanding	2.5
		Thinking	4
		Communication	4
		Application	4.5
		TOTAL	100

Assessment/Evaluation Strategies

A variety of assessment and evaluation methods, strategies and tools are required as appropriate to the expectation being assessed. These include diagnostic, formative and summative within the course and within each unit.

Assessment information is obtained through a variety of means, including the following:

- Ongoing descriptive feedback
- Small-group conversations to develop their opinions and communication skills

- Observations of student's performance while conducting experiments
- Observation of student's performance while conducting scientific research
- Conversations with student on a regular basis (synchronous and asynchronous)

Evidence of student achievement is collected from various sources, including the following:

- Ongoing observations of most consistent work, with consideration given to most recent work
- Graphs
- Tables
- Essays
- Tests
- Exams
- Diagrams
- Reports
- Essays
- Performance Task
- Concept maps and other graphic organizers
- Letters
- Quiz

Program Planning

This course is offered to students living in isolated northern Ontario communities which do not have access to regular high school facilities, equipment or teachers associated with secondary education. This course uses the internet for instruction, demonstration and research. It utilizes a student-centered semi-virtual classroom which capitalizes on the strengths of internet program delivery to minimize the disadvantages of geographic remoteness.

Students are presented with 1320 minutes of instruction/activity via the internet over the period of one week. All lessons, assignments, questions and course material is presented in this manner, with approved print materials available as a student resource in each classroom. The student and instructor communicate via the internet, while a classroom mentor (a fully qualified teacher) assists students in completing tasks in a timely manner and provides tutoring as required.
